User Interface Design

Team D

Main Panel

From the main panel, all of the websites are listed and you can click on a website which would then list the users. This panel is a simple and straightforward design, and is structured by grouping the website and user sections together.
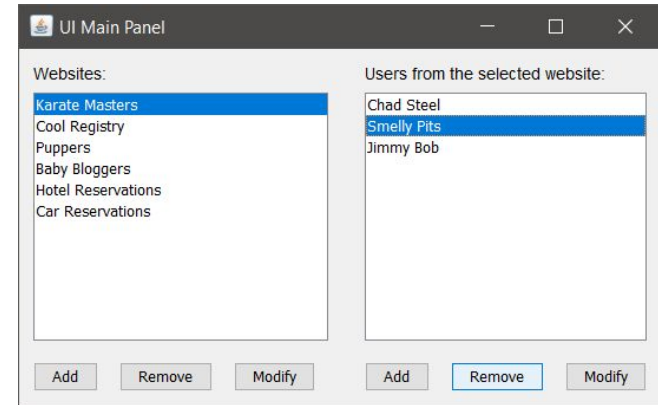

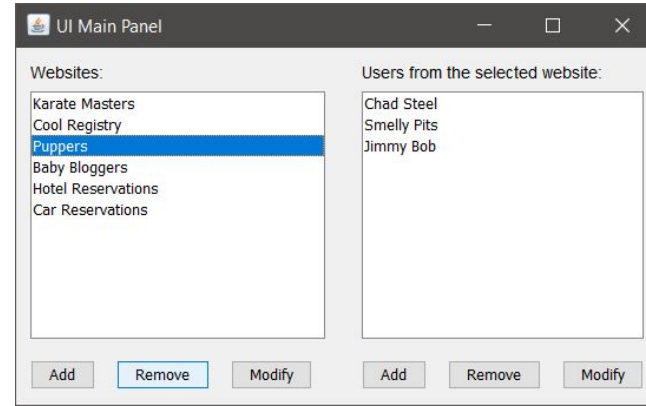

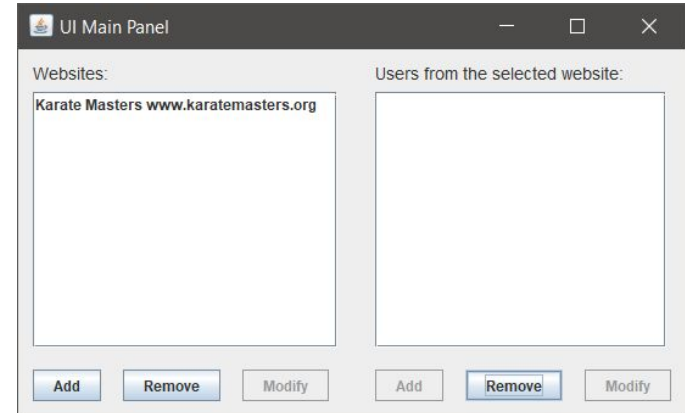

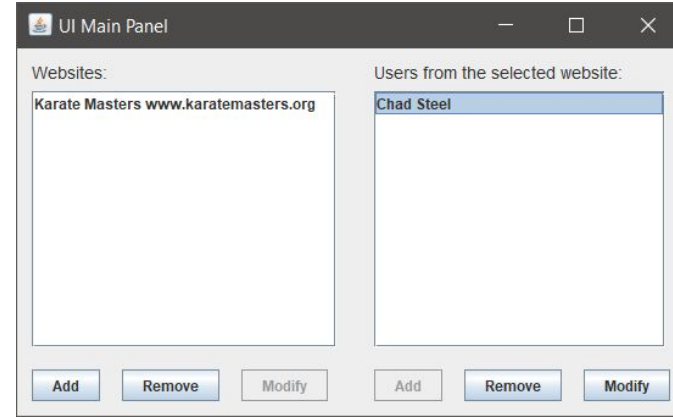

Remove Website

Selecting a website and clicking remove removes the website from the list and the repository while refreshing the window within the main panel user interface.
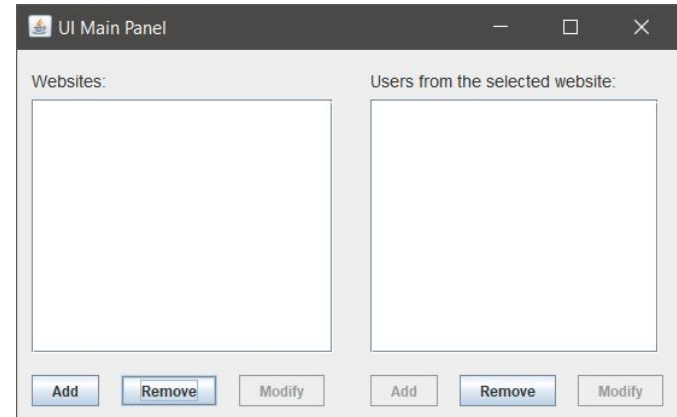

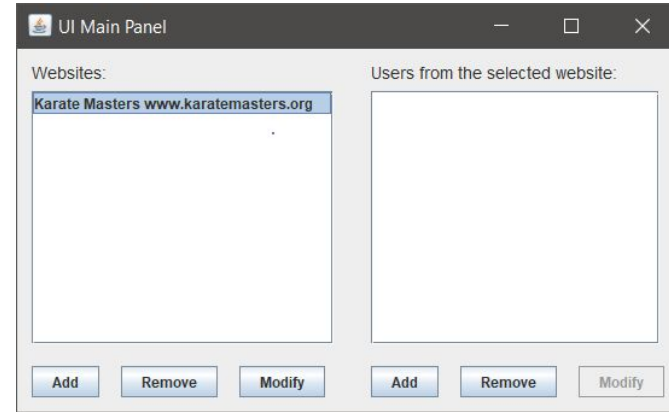

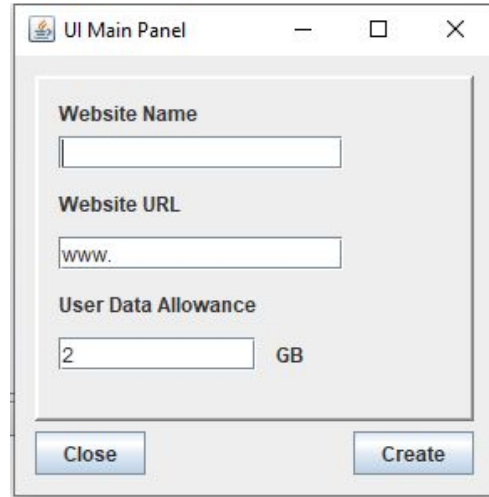

Remove User

Selecting a user and clicking remove removes the user from the list and the repository while refreshing the window within the main panel user interface.

Add Website

Here you can create/add websites. The panel displays some Tolerance by explaining errors to the user through a popup window.

Modify Website

Modifying a website is easy. This panel is recognizable as it is built the same as the adding website panel. The text boxes are automatically filled in with the currently stored data for the website.
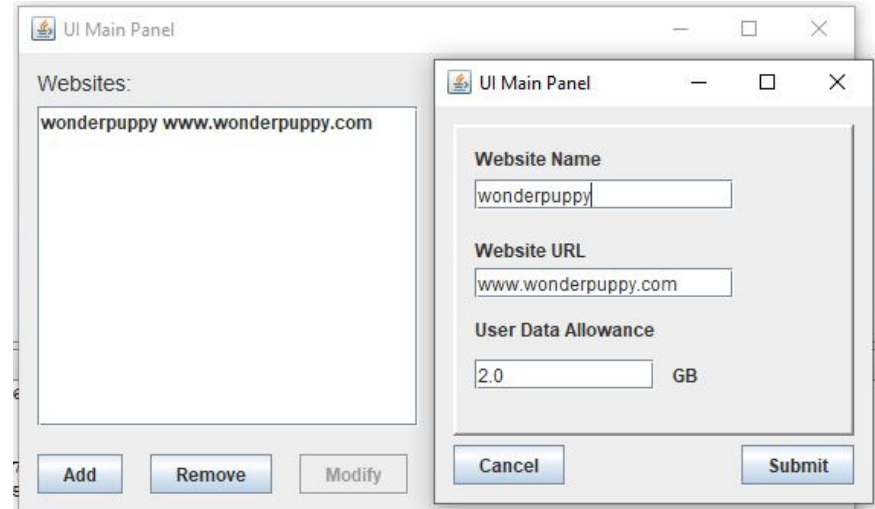

Add Users

- Adds users
- Displays required information to be entered
- Adding a user to a specific website
- When a user clicks the add user button, they should expect the username to show in the jList box.
- The usability of the GUI is accomplished through consistency.
- Similar appearance and behavior makes the GUI easier to learn

Adding a user: Add button disabled until website is selected
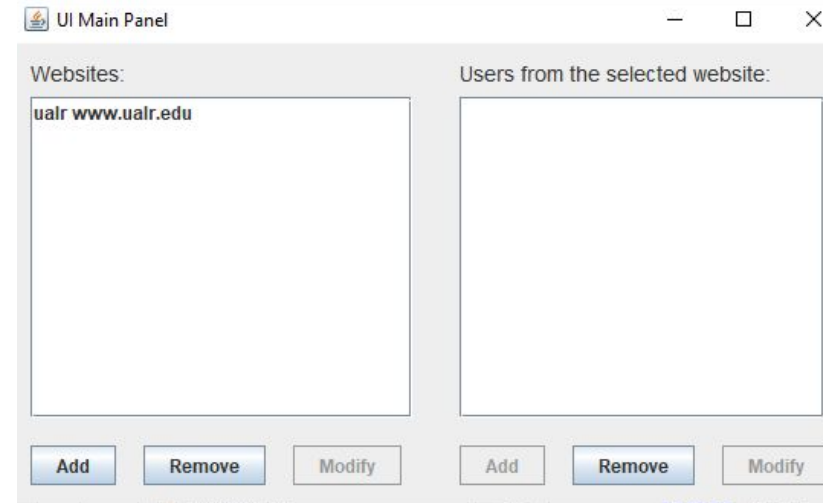

Adding a User: Add button is enabled when website is selected
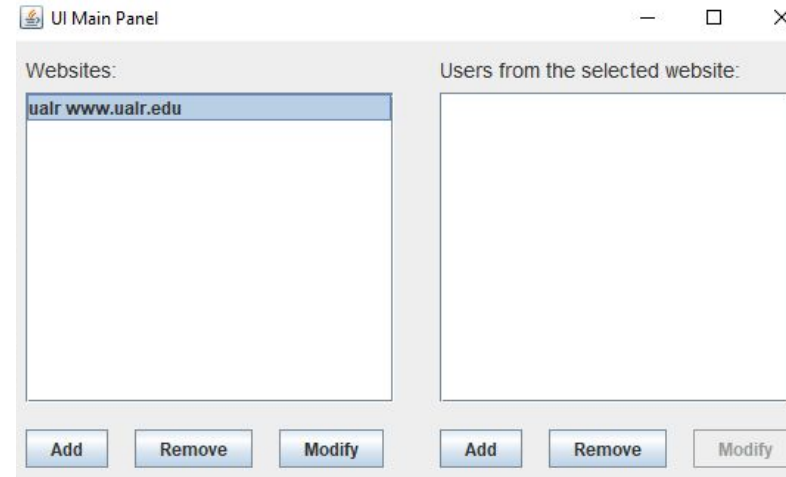

Modify Users

- Ability to update user information
- The design is consistent with adding a user.
- Also, it is consistent in design with adding a website and modifying a website

Modifying user: When username is selected, modifyUser button is enabled
